# 1. Overview

iBB is an internet based cash management system that provides balance and transaction information and single and bulk payment services. Linking with your Accounts Payable or ERP System, the Bulk Payment Upload facility allows you to upload, in a single file, payment instructions and remittance data going to beneficiaries in the SEPA zone (including Ireland)

The purpose of this document is to describe the SCT file format requirements, the layout of the file and the validations that will be performed.

## 1.1 Payment Types

The table below details the type of payment that is supported in the file:

Product	Definition	Debit Posting
SEPA Credit Transfers (SCT)	All non-urgent Euro payments debiting an AIB Branch Account going to an SCT reachable bank in Ireland and the SEPA Zone Recipient BIC and IBAN are mandatory	A single debit will be posted to the Branch Account for <b>all</b> payments within the same payment block in a file regardless of how many individual payments are made from the account.  The narrative on the debit account entry will be PFXXXXXXXXXXXXXX. PF stands for Payment File and XXXXXXXXXXXXXXXX is the unique file reference generated by AIB when the file is uploaded.

# 2. General Comments

The XML format of this file is based on an XML standard published by the ISO organisation. **ISO 20022** defines the formats for files used in the financial area. The format of the file to be used to submit Payment Instructions is part of the Payment Initiation (PAIN) suite. For Credit Transfers, the specific format is called **PAIN.001**. The version that AIB has used for these formats is **pain.001.001.03**. The XSD (XML Schema Definition, the XSD defines the structure of an XML document it will validate which elements are allowed in the XML document , the mandatory or optional elements, the lengths and acceptable values) attaching to these formats can be downloaded from the ISO20022 web site at [http://www.iso20022.org/message\\_archive.page#PaymentsInitiation3](http://www.iso20022.org/message_archive.page#PaymentsInitiation3).

## 2.1 The XML file structure:

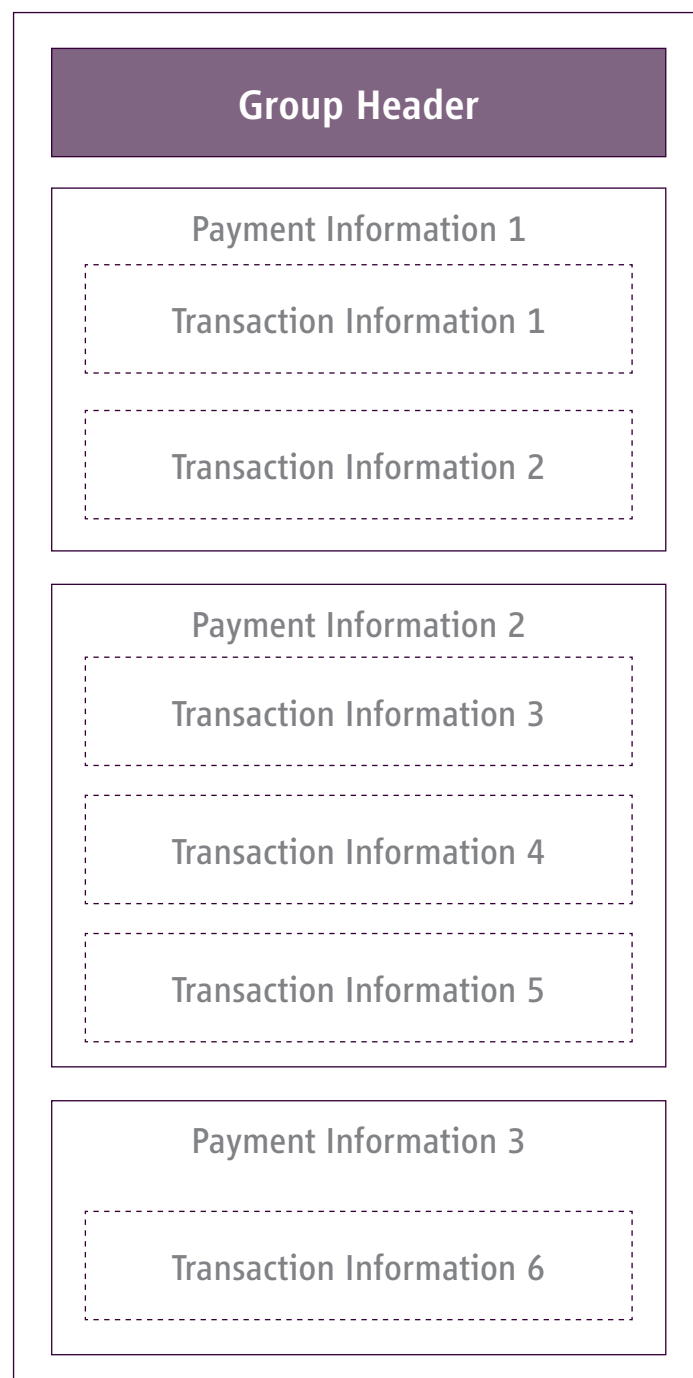

A file must contain a single Document (Envelope), which contains one single XML message.

The message is composed of 3 building blocks:

1. Group Header Block: This building block is mandatory and present once. Its function is to identify the file. It contains elements such as Message Identification, Creation Date and Time, Grouping Indicator.

2. **Payment Information Block:** This building block is mandatory and repetitive. It represents a logical grouping of your payments. It contains elements relating to the debit side of the transaction, such as the Debtor Account and Requested Execution Date for the transactions contained in the block.
3. **Transaction Information Block:** This building block is mandatory and repetitive. It represents the actual payments that you wish to make. It contains, amongst others, elements relating to the credit side of the transaction, such as creditor/recipient account and remittance information.

The diagram below shows how the Document is composed:

The table below shows how these blocks are to be coded within the actual XML file.

The XML Node column shows the xml “node name” used to describe the data (e.g. a <Document> node is used to start the file. The file will be ended with a </Document> node. All the xml within these nodes are part of the file.

The “+” signs in the XML Node column indicates the “depth” of the xml sub node e.g. the <CstmrCdtTrfInitn> is a subnode of <Document>, <GrpHdr> is a subnode of <CstmrCdtTrfInitn> etc.

XML Node	Cardinality	Comments
Document	Only one per file	Currently need to define the namespaces: xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xmlns="urn:iso:std:iso:20022:tech:xsd:pain.001.001.03"
+CstmrCdtTrfInitn	Only one per Document	
++ GrpHdr (Group Header)	Only one per <b>CstmrCdtTrfInitn</b>	The Group Header Block
++ PmtInf	One or more per <b>CstmrCdtTrfInitn</b>	A Payment Information Block. This is a logical grouping of Payment Instructions (CdtTrfTxInf blocks below) in a file. All the Payment Instructions within a Payment Information Block must be for: <ul style="list-style-type: none"> <li>• The same Debtor Account,</li> <li>• The same Requested Execution Date..</li> </ul>
+++CdtTrfTxInf	One or more per PmtInf	The Transaction Information Block: The actual Payment Instructions

## 2.2 The Character Set:

The SCT XML format can support a range of characters, as follows:

1. a b c d e f g h i j k l m n o p q r s t u v w x y z
2. A B C D E F G H I J K L M N O P Q R S T U V W X Y Z
3. 0 1 2 3 4 5 6 7 8 9
4. / - ? : ( ) . , ' +

These characters are also valid characters but they should not be inserted as the first or last character within any field. If invalid characters are included within the file, they may be substituted by a space or the file may be delayed and/or not processed by AIB. Examples of invalid characters include **ß Å and &**

5. Space

### 2.3 Multiple Occurrences of Data:

The XML file allows certain information to be specified at either the Payment Information Block level or Transaction Information Block level. For example, the Ultimate Debtor information for any given payment can be specified at Payment Information Block Level or at Payments Transaction Information Block level. If it is populated in both levels the file will be rejected. The table below will specify the tags that this restriction applies to.

### 2.4 Recipient/Creditor Account Details

EU legislation states that for **SEPA Credit Transfer (SCT)** payments, a combination of BIC and IBAN must be used to specify the recipient's account.

### 2.5 Charges Bearer:

This XML tag specifies which party will pay the charges associated with the processing of the payment instructions.

For SCT payments, EU legislation mandates that the respective charges are borne by the sender and the recipient of the payment i.e. SLEV. AIB will default the value of SLEV for SCT payments.

## 3. The SCT PAIN.001 File:

The table below shows **ALL** the allowable XML tags, how they should be formatted and how they will be validated by AIB.

The format for all tags is Alpha Numeric unless otherwise stated.

The XPATH listed below for each field is the location of the field within the file.

### 3.1 DOCUMENT

Each file must begin with

```
<?xml version="1.0" encoding="UTF-8"?>
```

```
<Document xmlns="urn:iso:std:iso:20022:tech:xsd:pain.001.001.03" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">

## 8. The PAIN.002 File:

A Reject file will be returned to you and will be based on the PAIN.002 format for customers who submit a PAIN.001 file.

A Reject File is generated where a file has been validated successfully, but the processing of the Payment Instructions failed for some reason. The Reject File will always contain Payment Instructions.

The overall structure of a PAIN.002 file is:

Block Type	Cardinality	Comments
Group Header	Only one per file	This block will be present on all Reject files.
Payment Info Response Block	One or more per File	This block will be present if the file contains rejected Payment Instructions because: <ol style="list-style-type: none"> <li>1. The Payment Instruction failed initial validation or</li> <li>2. A problem was encountered when attempting to process the Payment Instruction (in which case it will appear on a Reject File)</li> </ol> There will be one of these blocks for each Payment Info block containing invalid/rejected Payment Instructions.
Transaction Response Block	One or more per <b>Payment Info Response Block</b>	There will be one of these for each Rejected Payment Instruction. The <b>Transaction Status</b> will be RJCT

The layout and population of the PAIN.002 file is as below:
