## 1. About this document

HMRC will use the following default values within the error structure when parser errors are located.

On submission the message is tested against the XML schema by the parser. XML that successfully passes through the parser will then be tested against the GovRules, which test the cross-field validation.

This document identifies every element in the business validation rules. In all cases a parser error will be generated if the submission fails at parser level. If there is no specific cross-field validation for an element it is simply noted 'Parser error'. Where there is a cross-field validation the error and error message only is detailed.

Element	Description and Value
RaisedBy	HMRC-ERIC
Number	5012 – all errors caused by schema validation 6010 – all errors from badly-formed XML
Type	business
Text	Default text from Parser
Location	Line and position number from the Parser

**2. Data items**

**Each submission must contain only 1 occurrence of Pension Scheme Tax Reference, but may contain multiple occurrences of Scheme Administrator ID.**

<b>1. Pension Scheme Tax Reference</b>
